Lisa --

Which Los Angeles residents have the longest morning commutes? Which residential area has the highest vacancy rate? Which district has the oldest Angelenos? How about the highest and lowest incomes? And where in the City are unemployed women most likely to live?

The answers to these questions and many more are now available online on EconomyPanel LA, a new online dashboard that my office launched today. The site enables residents, businesses, non-profits and academics to explore economic and demographic information about the City--broken down by council district.

EXPLORE ECONOMYPANEL LA

EconomyPanel LA empowers Angelenos with key data to make more smart and informed decisions, investments and choices. With the information we've put online, residents, businesses and policymakers all have new tools to separate facts from fiction, and to reach better data-driven conclusions.

Users can delve deep into the data by investigating more than 50 key indicators for each council district. Those indicators include average wages, unemployment rates, population by age and race, and the number and value of building permits awarded. Users can pick and choose from the various indicators to create their own scorecards, which can be easily downloaded and shared via social media.

I hope you'll explore the economics and demographics of your community. And when you find something interesting, don't forget to share it with us on Twitter or Facebook.

Sincerely,

L.A. City Controller Ron Galperin
